

YUSHIN UNIVERSITY

your online resource and training center

Dear Yushin Customer,

Yushin has developed an on-line curriculum and created Yushin University as a service to the molding and robotics industries.

These are professional video training courses that permit you to learn and develop skills that meet or exceed industry requirements.

- Improve workplace efficiencies and productivity.
- Train at your facility, at your convenience, at your own pace.
- Permits unlimited refresher courses.
- An on-line quiz will be administered at the completion of the course.

Successfully completing the quiz will provide you with a downloadable certificate of completion. This will identify you as having attained a successful understanding of that specific topic.

You may find these certificates useful for documenting your skill sets to your employer.

Each on-line training course will highlight a specific topic and will be followed with a comprehension quiz. Currently, available courses highlight Yushin's YC/RC models.

- Robot Operation – step by step instructions of the safe, efficient operation of the robot
- Lead-Through-Teach (LTT) – step by step instructions to teach a robot customized sequences. Topics include: adding a timer; adding move positions; adding new inputs and/or outputs
- Mode Select – step by step instructions to create and operate alternate sub-programs
- Courses are now available in Spanish

There is no charge for approved companies and institutes of higher learning. Request more information at info@yushinuniversity.com.

Sincerely,
Michael Greenhalgh
Dean of Students Director of Operations

YC/E-TOUCH COMPACT CONTROLLER

AVAILABLE TRAINING VIDEOS

Department	Operator, Set Up, Maintenance
	YC MODE SELECT TRAINING VIDEO - SPANISH Available Operator, Set Up, Maintenance, Admin Oct 2 2017 - 5:42pm VIEW QUIZ
